## DETAILED ACTION

### *Drawings*

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "network" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-2, 5-9, 11-12, 15-19, and 21-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Dahlke (US 5,991,355).

Regarding claims 1-2 and 7, Dahlke discloses an apparatus for monitoring wear of a connector having first and second parts (16, 18), the apparatus comprising:

a sensor (6) sensing an insertion or extraction of the first part of the connector with the second part of the connector, the insertions or extractions being associated with wear of the connector (figure 2, col. 2, lines 30-40); and

a monitor (4) responsive to the sensor to monitor the wear of the connector (figure 2, col. 2, lines 50-64).

Regarding claim 5, Dahlke discloses the monitor is coupled to the sensor via a network (figure 2).

Regarding claims 6 and 8, Dahlke discloses the monitor includes: a processor to process signals received from the sensor; and memory coupled to the processor to store data related to the processed signals (col. 2, lines 20-26).

Regarding claim 9, Dahlke discloses the processor generates an alarm signal (28, col. 2, lines 65-67).

Regarding claims 11-12, 15-19, the claimed method steps would have been inherent in the product structure as stated in claims 1-2, 5-9 above.

Regarding claims 21-22, refer to claim 1 above.

#### ***Allowable Subject Matter***

4. Claims 3-4, 10, 13-14, 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### ***Response to Arguments***

5. Applicant's arguments with respect to claims 1-22 have been considered but are moot in view of the new ground(s) of rejection.

#### ***Conclusion***
